Queen's University Biological Station Species List: Ants, Bees and Wasps

The current list has been compiled by Dr. Ivy Schoepf, <u>QUBS Research Coordinator</u>, in 2018 and includes data gathered by direct observation, collected by researchers at the station and/or assembled using digital distribution maps. The list has been compiled using resources from <u>The Natural Heritage</u> <u>Information Centre</u> (April 2018); <u>The IUCN</u> <u>Red List of Threatened Species</u> (February 2018); <u>iNaturalist</u> and <u>GBIF</u>. Contact <u>Ivy</u> to report any errors, omissions and/or new sightings.

Based on the aforementioned criteria we can expect to find 37 species of hymenopterans (class: Insecta, Order: Hymenoptera) present at QUBS. All species are considered QUBS

residents unless otherwise stated. Four species are considered to be introduced (*i*). Species are reported using their full taxonomy; common name and status, based on whether the species is of global or provincial concern (see Table 1 for details).
